Dragonswap

Dragonswap will be your all in one Binance Smart Chain DeFi Network

Since the inception of DeFi, most projects have been built and run on the Ethereum blockchain. But, as more and more people have been flocking to Decentralized Finance, and more and more people have been therefore using the Ethereum Blockchain, it has hit its network cap and gas fees have become ridiculous and network speeds, slower and slower. We have decided to remedy this situation by creating a sustainable yield farming project on a faster and cheaper chain, the Binance Smart Chain (BSC).

DCASH will be a BEP-20 token running on the Binance Smart Chain which is a very interesting alternative to the famous slow and congested ETH chain.

It will reward liquidity providers that stake their LP tokens on the Dragonswap.app website with it's native token, DCASH. Initially it's higher yield pairs will be: BNB/DCASH, BUSD/DCASH, and it's lower yield pairs: BNB/CAKE and BNB/BUSD and more pools will be added based on community votes shortly after launch. A percentage of LP tokens deposited/withdrawn will be sent to a smart contract that uses various techniques and methods to generate income for the protocol.

Stable Pool staking:

To start 3% of LP tokens withdrawn are used to buy BNB/BUSD/ETH and stake them in stable pools, 50% of these rewards will be sold and used to buy DCASH and burn it, and the other percent will go to farmers.

The Withdrawal tax generates income for the project to use in various ways and discourages LP token withdrawal as people are receiving rewards everyday by keeping their LP tokens staked.

Dragonswap will launch with farming live on the following pools on Pancakeswap:

BNB/DCASH - 40% of TPB & BUSD/DCASH - 30% of TPB

BNB/BUSD -10% of TPB & BNB/CAKE - 10% of TPB

BNB/ETH 10% of TPB

*Once the Dragonswap DEX is live the new pools will be:

Dragonswap pools:

BNB/DCASH - 30% of TPB & BUSD/DCASH - 20% of TPB

BNB/BUSD - 5% of TPB & BNB/CAKE - 10% of TPB

Cakeswap pools:

BNB/DCASH - 15% of TPB & BUSD/DCASH - 10% of TPB

BNB/BUSD - 2.5% of TPB & BNB/CAKE - 5% of TPB

BNB/ETH 2.5% of TPB

Tokens per block

Started at 5TPB and changes with future votes.

Partnerships: Will be discussed with other project and the community.

Deposit & Withdrawal taxes:

Deposit:

None

Withdrawal tax 5%

1% Farming stable bsc pools.

1% Renewable mining fund.

1% Team.

1% Lottery fund.

1% Project.

Note: All taxed DCASH are burned, except from the lottery fund once the lottery is live!

Dragonswap Roadmap:

1. Hoard pools.
2. Stake with BNB.
3. DCASH Burn Lottery.
4. DEX (Decentralized Exchange) goes live.
5. DCASH available for sale on dragonswap.app
6. Dragonsafe.
7. Governance.

Full Explanations:

1. **Hoard Pools**: Stake a single asset and earn DCASH. HOARD token the token and contract for single asset staking. Investors might be able to stake dcash and earn BNB and vice versa.

2. **Stake with BNB:** Dragon Swap farmers will be able to farm directly with BNB alone to the farm without needing to add liquidity anywhere else. How is that done?
A smart contract will use half of a users BNB to buy the other token of the chosen pool, it will then add liquidity to that pool and stake the LP tokens to earn $DCASH.

3. **The Burn Lottery:** (Dragonswaps deflationary mechanism), Dragonswap will have a fun lottery that allows its users to risk their DCASH tokens and win other tokens (that have been held from LPs fees) such as BNB, BUSD, DCASH, CAKE, ETH. the DCASH lost will be burned lowering the DCASH supply and increasing the DCASH token value and rarity. At first it will work like Pancakes for a short time except for one difference, it will actually lower the DCASH supply. Version two will be much much more exciting !

4. **DEX goes live:** Soon after launch The Dragonswap DEX will go live, and as more and more money is generated in the DEX fund wallet, more pairs will be bought.

5. **Buy DCASH on Dragonswap:** The DCASH token will be available to buy directly on Dragonswap, there will be a button on the website where users will be able to purchase DCASH token directly without needing to swap for it on an exchange.

For a short time, Dragonswap users will need to buy DCASH the Dragonswaps native token via Pancakswap but soon after launch will be able to buy it directly via dragonswap.app.

6. **Dragonsafe:** The Dragonswap team is working on building the first BSC multisig and users will be able to pay in BNB, or DCASH for transactions, and later it will have an ETH net component.

7. **Governance:** Voting will be available for DCASH token holders to make decisions for future additions to the protocol.
